PyGameMaker — Tutorial 1: First Steps — Answer Key

> For teachers only do not hand out to students. The numbering below matches this tutorial's Worksheet.

Worksheet Answer Key

Part A: 1-B, 2-D, 3-C, 4-A.

Part B: 1. The Asset List (left panel). 2. The Sprite Editor (Editor Area, opened by double-clicking the sprite). 3. The Properties panel (right). 4. The toolbar (or **Build > Test Game**, or F5).

Part C:

1. An object is only a description until it is placed in a room; the room is what the game actually shows. Accept any answer that separates "made" from "placed".
2. Any two of: the object has no sprite assigned; the object was never placed in the room; the wrong room was tested; the sprite is empty or transparent.
3. No. Movement needs a Keyboard event with an action, which is introduced in Tutorial 2. Students who expected movement have understood correctly that objects can move; the missing piece is the event.

Parts D and E: completion and reflection; no single correct answer. Use Part E to pick pairs for next session (a student who found something easy with one who found it hard).
