PyGameMaker — Tutorial 2: Your First Game — Worksheet

Name: _____ Date: _____

Do this worksheet after you have played your finished Catch the Star game.

Part A: Words

Match each word with what it means. Write the letter next to the number.

1. Event ____
2. Action ____
3. Alarm ____
4. Spawner ____

- **A.** An invisible object that creates other objects
- **B.** A timer that triggers something after a number of steps
- **C.** Something that happens in the game, such as a key press
- **D.** What an object does when an event happens

Part B: Which event?

Write the event you need for each job.

1. Move the player left while the left arrow is held: _____
2. Make a star start falling as soon as it appears: _____
3. Add points when the player touches a star: _____
4. Remove a star that fell off the bottom of the screen: _____
5. Show the score on the screen every frame: _____

Part C: Think about it

1. The spawner uses *Set Alarm 0 to 60* twice. Where, and why?

2. Your game runs at 60 steps per second. How often does a new star appear, and how would you make it appear twice as often?

3. In the collision event on the player, what would happen if you chose *Destroy this instance* instead of *Destroy other instance*?

Part D: Try it

- [ ] The player moves with the arrow keys and stops when I let go
- [ ] Stars fall from different places at the top
- [ ] Catching a star gives 10 points and removes the star
- [ ] Stars that I miss do not pile up
- [ ] The player cannot leave the screen

Part E: Look back

1. What I am proudest of: _____
2. A bug I found and fixed: _____
3. What I would add next: _____
