PyGameMaker — Tutorial 4: Breakout — Worksheet

Name: _____ Date: _____

Do this worksheet after you have played your finished Breakout game.

Part A: Words

Match each word with what it means. Write the letter next to the number.

1. Parent object ____
2. Child object ____
3. Death zone ____
4. Highscore ____

- **A.** An object that uses another object as its template
- **B.** An invisible object that detects that the ball has been lost
- **C.** A template object whose events other objects inherit
- **D.** The best scores, kept in a table

Part B: Which action?

Write the action that does each job.

1. Make the ball go back the other way after hitting a side wall: _____
2. Remove a brick when the ball hits it: _____
3. Take one life away when the ball falls: _____
4. Show the "Game Over!" dialog: _____
5. Close the game window: _____

Part C: Think about it

1. You add a purple brick object. What must you set so that the ball already knows how to break it? Do you need to change the ball?

2. The ball moves with horizontal speed 3 and vertical speed -3. In which direction does it start? Why is the vertical speed negative?

3. In the No More Lives event, the actions are Show message, Show Highscore, End Game. Why do the tutorial and your teacher want them in this order?

Part D: Try it

- [ ] The paddle moves and stops at both side walls
- [ ] The ball bounces off the walls, the top and the paddle
- [ ] Bricks of all four colours break and give 10 points
- [ ] Losing the ball costs a life
- [ ] After the last life, Game Over appears and the game closes

Part E: Look back

1. What I am proudest of: _____
2. A bug I found and fixed: _____
3. What I would add next: _____
