PyGameMaker — Tutorial 5: Sokoban — Worksheet

Name: _____ Date: _____

Do this worksheet after you have solved your own Sokoban level.

Part A: Words

Match each word with what it means. Write the letter next to the number.

1. Grid movement ____
2. Key press ____
3. Target ____
4. Restart room ____

- **A.** An event that happens once each time a key goes down
- **B.** Put the level back the way it started
- **C.** Moving in fixed steps, such as 32 pixels at a time
- **D.** A marker on the floor that crates are pushed onto

Part B: Which object?

Write which object each rule belongs to.

1. Moves one square when an arrow key is pressed: _____
2. Is pushed one square when the player walks into it: _____
3. Changes its picture when it stands on a target: _____
4. Draws the instructions and listens for the R key: _____
5. Blocks the player and the crates: _____

Part C: Think about it

1. The crates are Solid but the targets are not. What would go wrong if the targets were Solid?

2. A player stands next to a crate with a wall directly behind the crate. What happens when the player walks toward the crate, and which action decides that?

3. Your level has 3 crates and 2 targets. Can it be solved? What does that tell you about designing levels?

Part D: Try it

- [ ] The player moves exactly one square per key press
- [ ] Walls stop the player and the crates
- [ ] A crate turns green on a target and brown again when pushed off
- [ ] Pressing R restarts the level
- [ ] My level has as many targets as crates and I have solved it

Part E: Look back

1. What I am proudest of: _____
2. A bug I found and fixed: _____
3. What I would add next: _____
