PyGameMaker — Tutorial 7: Platformer — Worksheet

Name: _____ Date: _____

Do this worksheet after you have played your finished platformer.

Part A: Words

Match each word with what it means. Write the letter next to the number.

1. Gravity ____
2. Vertical speed ____
3. Hazard ____
4. Game Start ____

- **A.** Something that hurts the player, like a spike
- **B.** An event that runs once when the whole game begins
- **C.** A force that pulls an object down every step
- **D.** How fast an object moves up (negative) or down (positive)

Part B: Which event?

Write the event you need for each job.

1. Make the player start falling as soon as it appears: _____
2. Make the player jump once each time the up arrow is pressed: _____
3. Add points when the player touches a coin: _____
4. Set the lives to 3 once, at the start of the game: _____
5. Draw the score on the screen: _____

Part C: Think about it

1. The jump sets the vertical speed to -10 and gravity adds 0.5 each step. Roughly how many steps does it take for the speed to reach 0, at the top of the jump?

2. Your friend's player floats in the air very slowly instead of falling. Which action in **No key** would cause that, and what should it be?

3. Your friend sets the lives to 3 in the controller's **Create** event. What happens after the first spike, and why?

Part D: Try it

- [ ] The player falls, lands and stands on the ground and on platforms
- [ ] The player runs left and right and jumps once per key press
- [ ] Coins give 10 points and disappear
- [ ] A spike costs a life and the lives stay lower after the restart
- [ ] The flag shows "You Win!"

Part E: Look back

1. What I am proudest of: _____
2. A bug I found and fixed: _____
3. What I would add next: _____
