PyGameMaker — Tutorial 8: Lunar Lander — Worksheet

Name: _____ Date: _____

Do this worksheet after you have landed your lander at least once.

Part A: Words

Match each word with what it means. Write the letter next to the number.

1. Thrust ____
2. Gravity ____
3. Landing pad ____
4. HUD ____

- **A.** Text on the screen that gives the player information
- **B.** A force that pulls an object down a little more each step
- **C.** A push that fights gravity
- **D.** The only place where touching down is a success

Part B: Which event?

Write the event you need for each job.

1. Start the lander falling as soon as the game starts: _____
2. Make the lander climb while the up arrow is held: _____
3. Show "Landing successful!" when the lander touches the pad: _____
4. Restart the level when the lander touches the ground: _____
5. Draw the title text on the screen: _____

Part C: Think about it

1. Holding Up sets the vertical speed to -2. What happens to the lander's speed after you let go, and why does it not stop at once?

2. With the tutorial's game, does it matter how fast the lander is going when it touches the pad? How could you change the game so that a hard landing is a crash?

3. Your friend's "Landing successful!" message appears again and again. What is the cause and the fix?

Part D: Try it

- [ ] The lander falls slowly, climbs with Up and steers with Left and Right
- [ ] Touching the pad shows "Landing successful!" once
- [ ] Touching the ground shows "Crashed!" and restarts the level
- [ ] The title and the instructions are visible on the screen
- [ ] I have landed on the pad at least once

Part E: Look back

1. What I am proudest of: _____
2. A bug I found and fixed: _____
3. What I would add next: _____
